

## **Eigen Ltd Supporting EYR**

Eigen Ltd are kindly sponsoring the students from Northease Manor School who are broadcasting for the first time as special guests of EYR.

Eigen is an Engineering Systems Integrator and partners with Oil & Gas Exploration and Production companies looking to develop integrated operations. This means helping engineers do their day job by bringing together important information from different systems and giving them remote access to live control rooms from their desks. We do this by using our engineering know-how to select appropriate technology and integrate it with control systems, reporting systems and business systems like databases and web browsers. This involves knowledge of engineering, production and reservoir operations, project management, working at site, keeping up to date with the latest technology and being able to plan, budget and deliver complex projects.

Some of the projects they have delivered are:

- Major E&P oil and gas facilities in the Caspian - including 2 onshore terminals, 8 offshore platforms, approx. 300 wells & 3 pipelines
- Production Reporting and Well Test for onshore oil facility start up in India
- Architecture of systems for integrated operations in Australia

The head office is based in Leatherhead and the company works on project around the World from Azerbaijan to Australia. See [www.eigen-ltd.com](http://www.eigen-ltd.com)
